How to Search & View Studies in 3DICOM

Searching & Viewing Patient Studies in 3DICOM

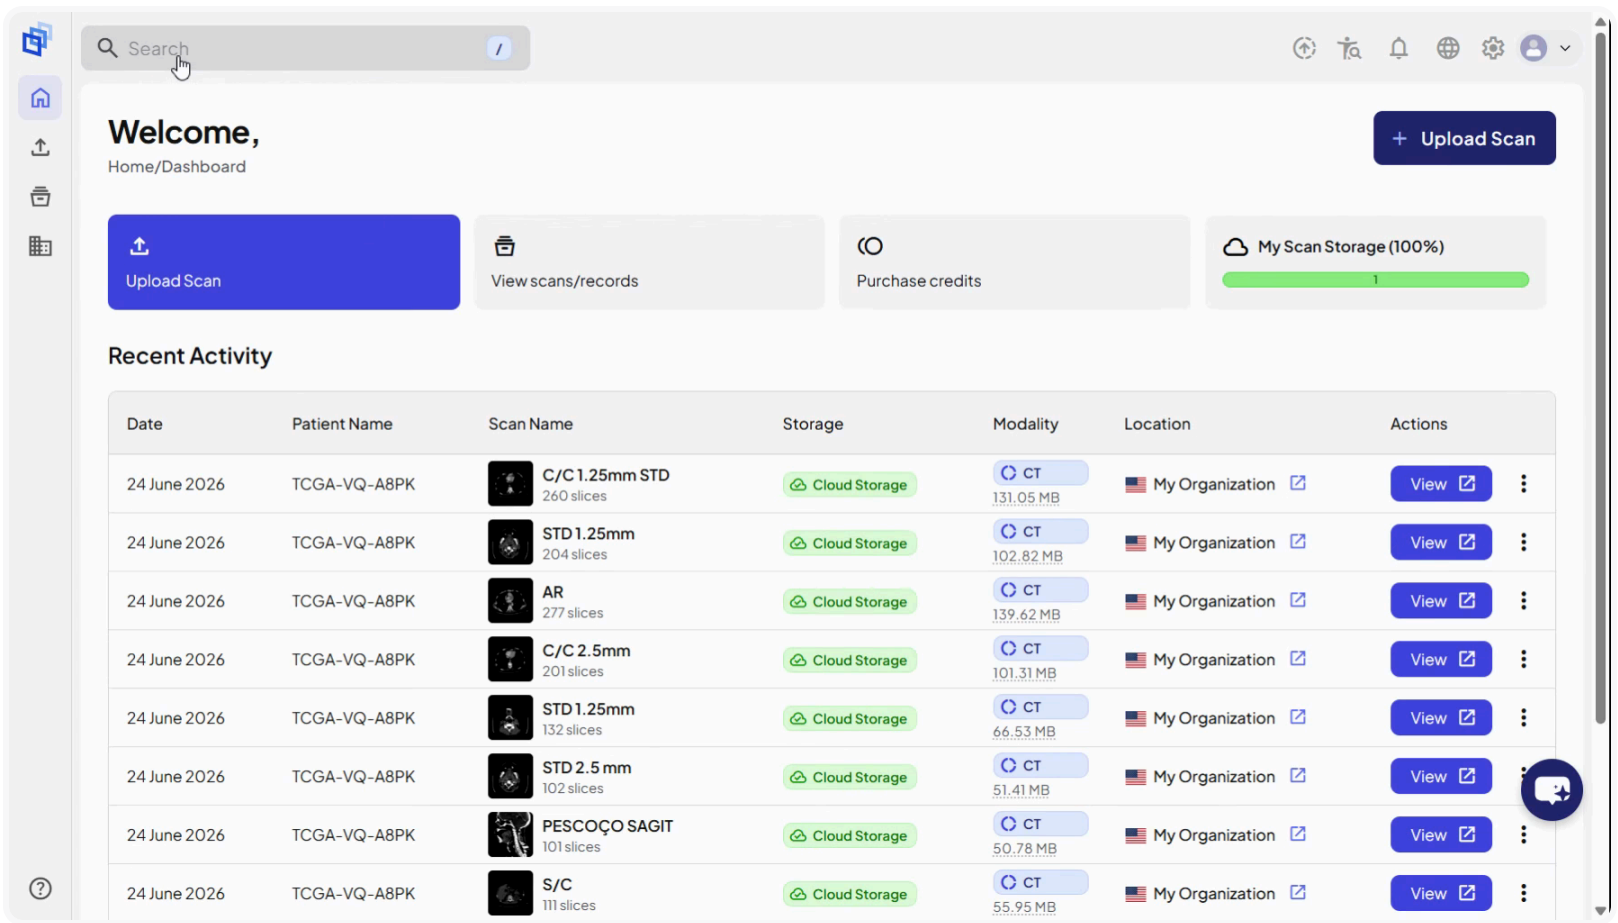
Overview

This guide shows you how to search for a patient record and view their studies using the 3DICOM platform. You'll learn how to use the global search, apply filters, and open patient studies in the 3DICOM Viewer.

Step-by-step instructions

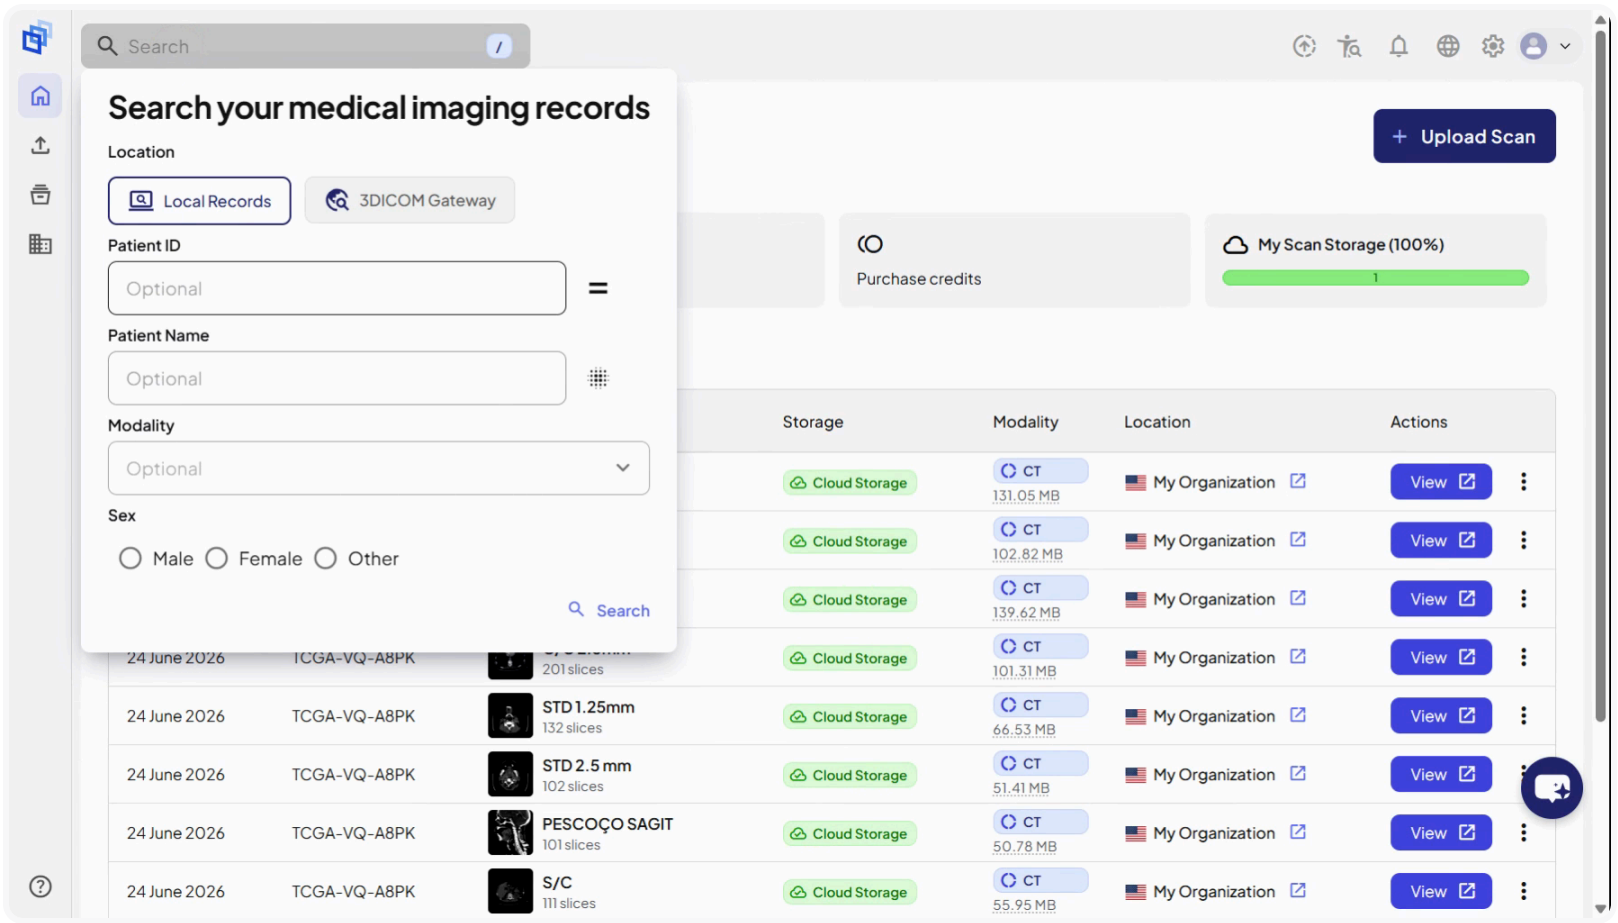
Open the global search

Step 1. Click into the global search field at the top of the interface to open the search panel.

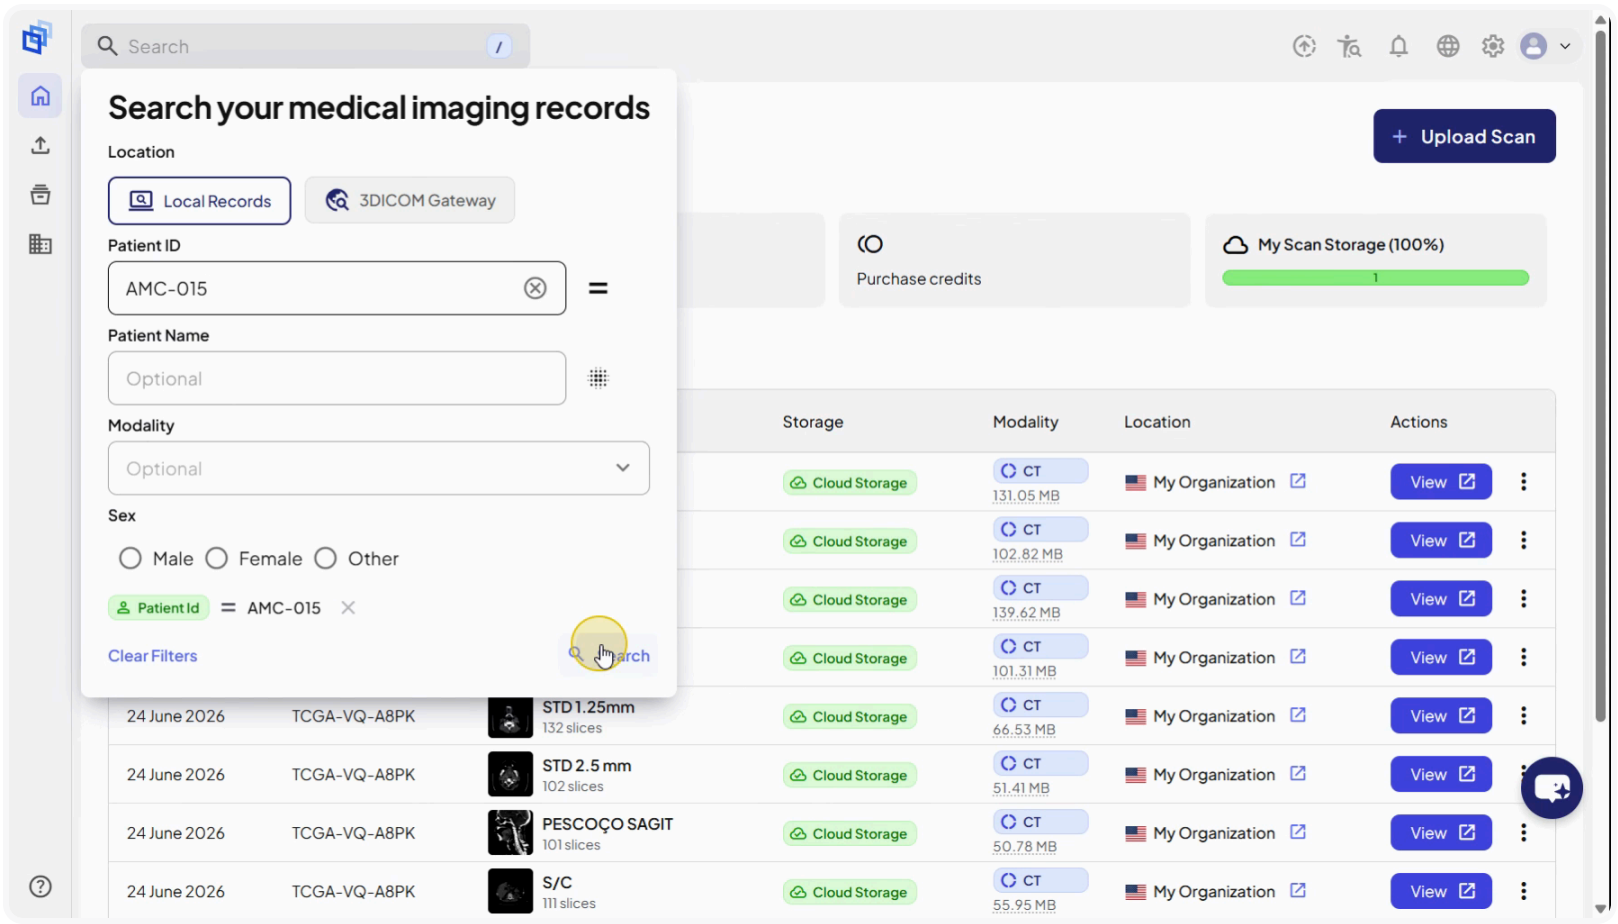


Search for a patient

Step 2. Click into the **Patient ID** input field and enter the Patient ID for the record you want to review.



Step 3. Click **Search** to run the query.



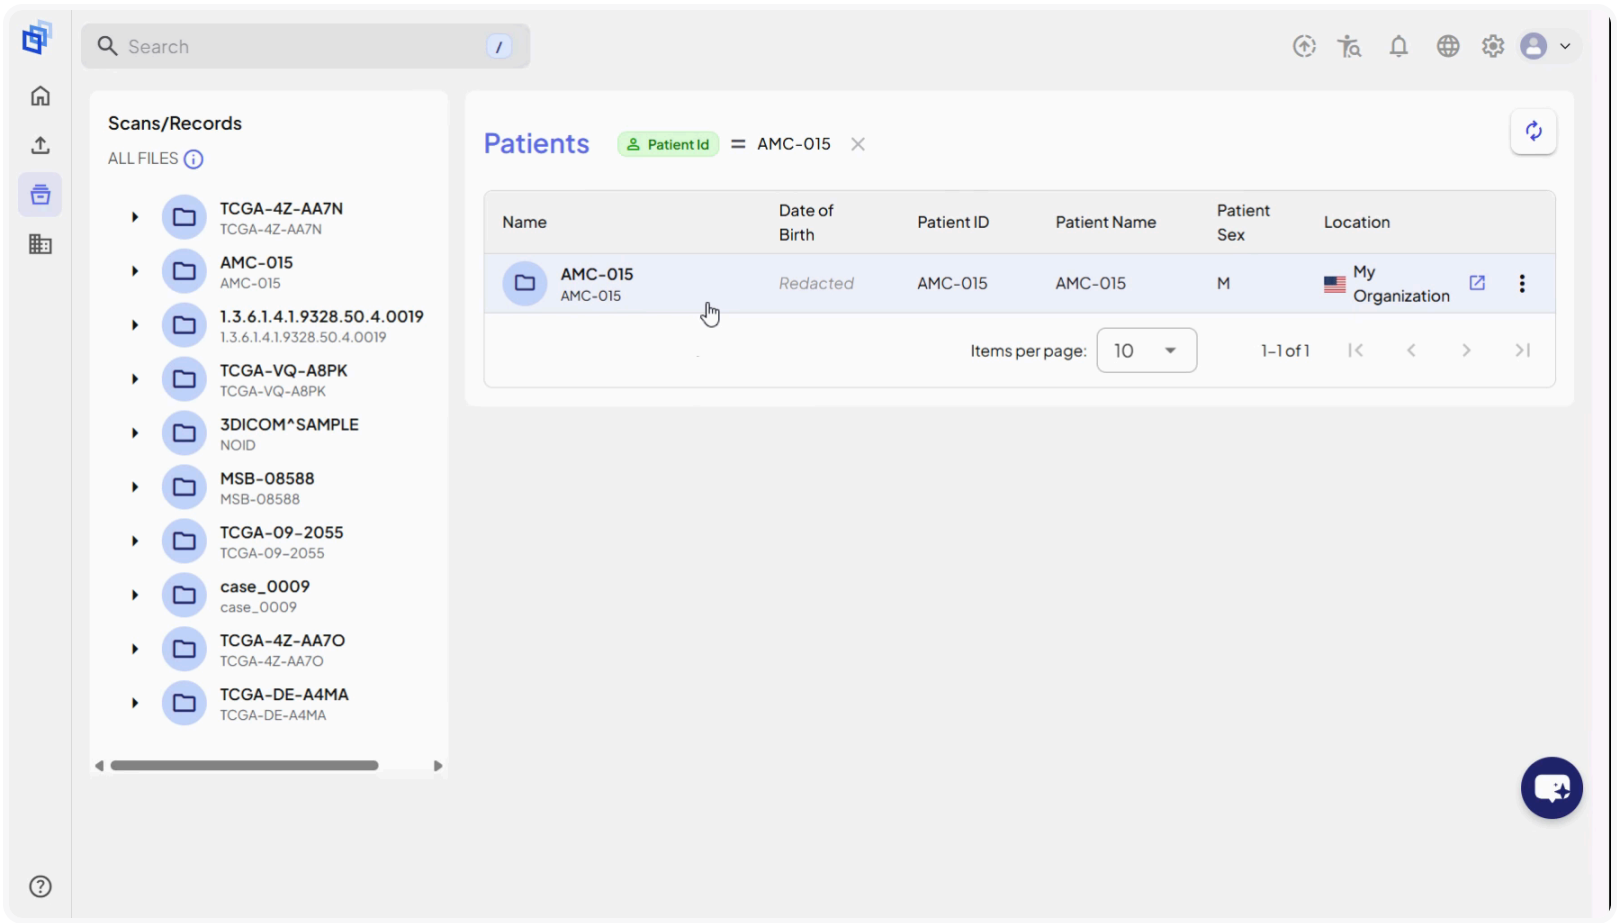
Filter and select the patient record

Step 4. After the search, you will be taken to the **Scans & Records** page. The **Patients** table will display only the records matching your search criteria.

Step 5. Review the applied filters, which are shown as removable tags above the table. You can remove these filters at any time to adjust your search.

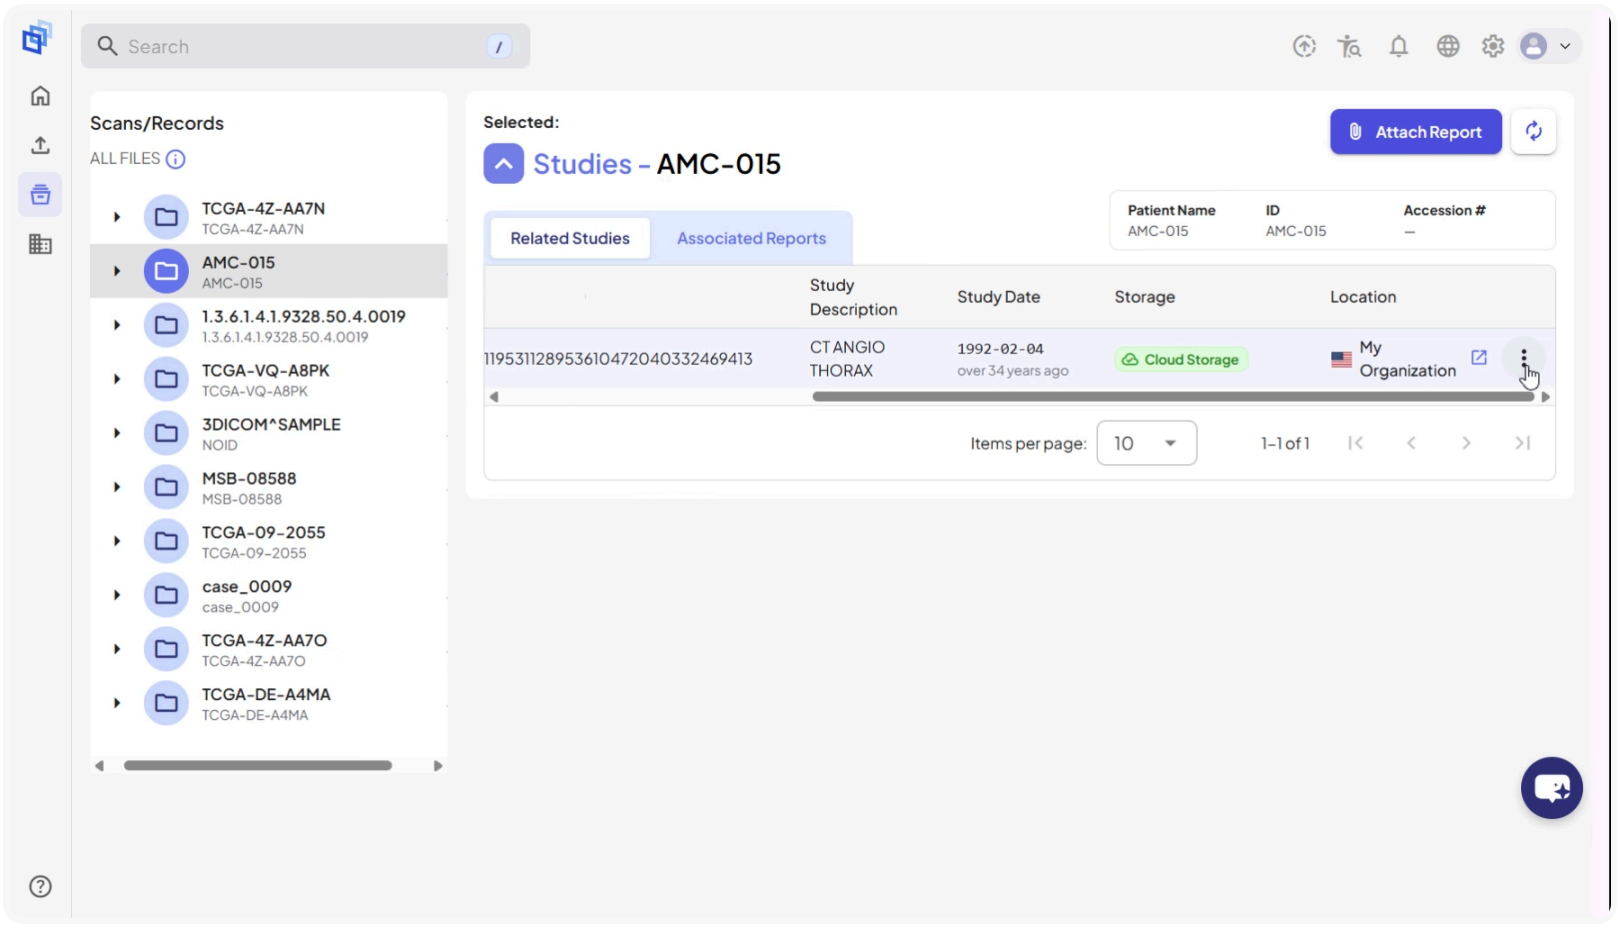
Open associated studies

Step 6. Double-click the patient record that matches your search to view the associated studies.

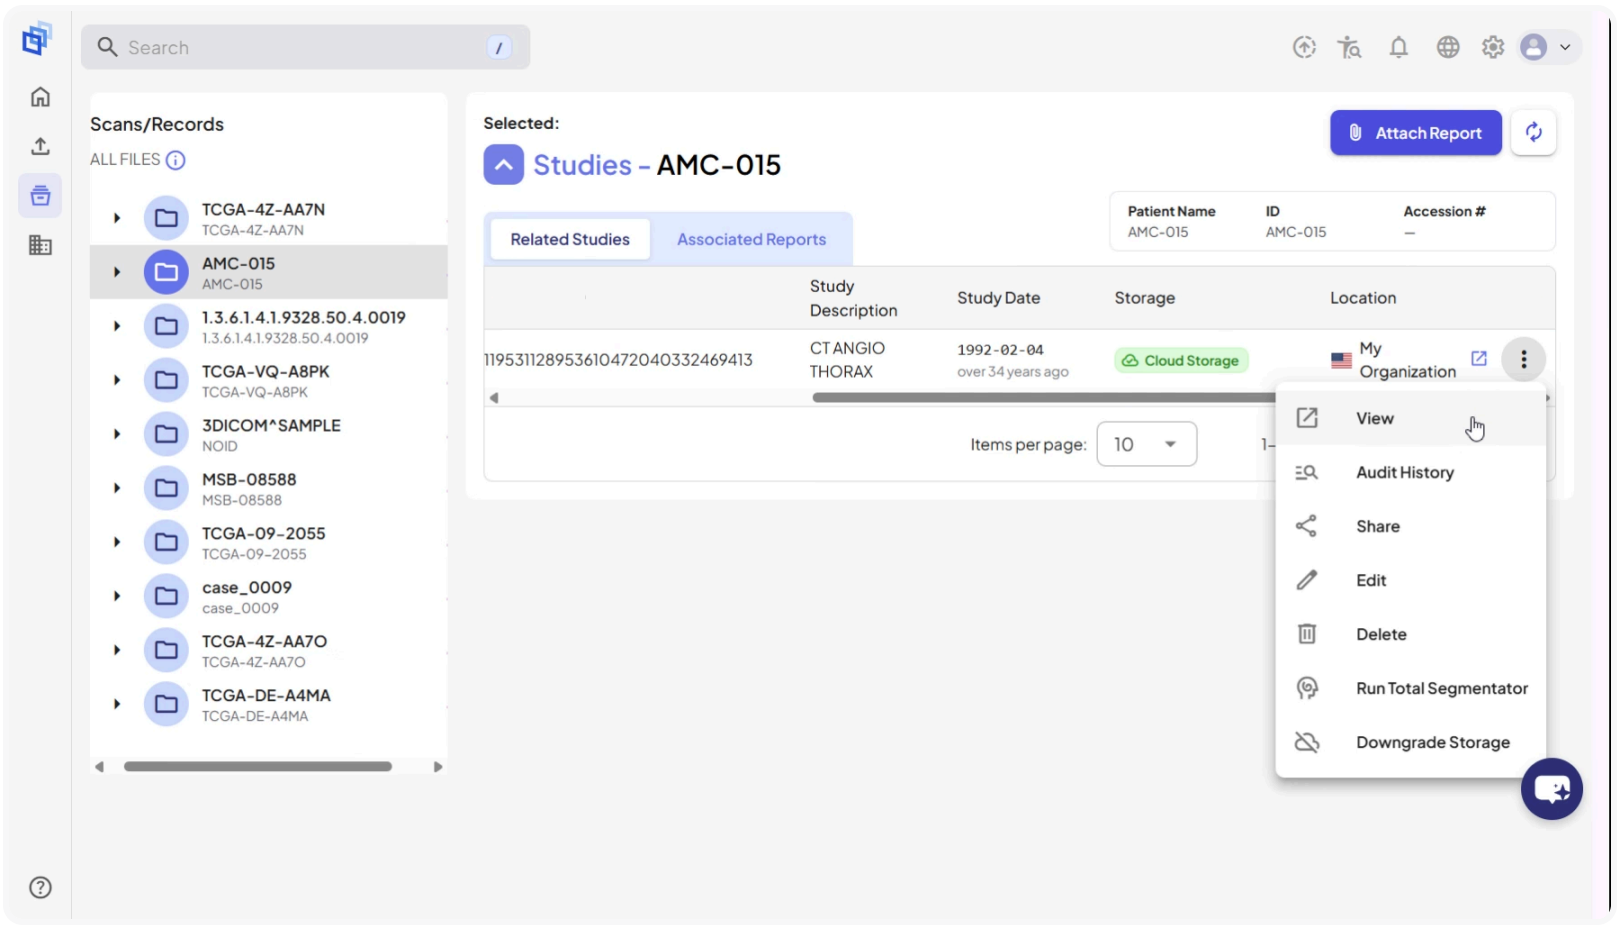


Step 7. In the studies list, find the study you want to review.

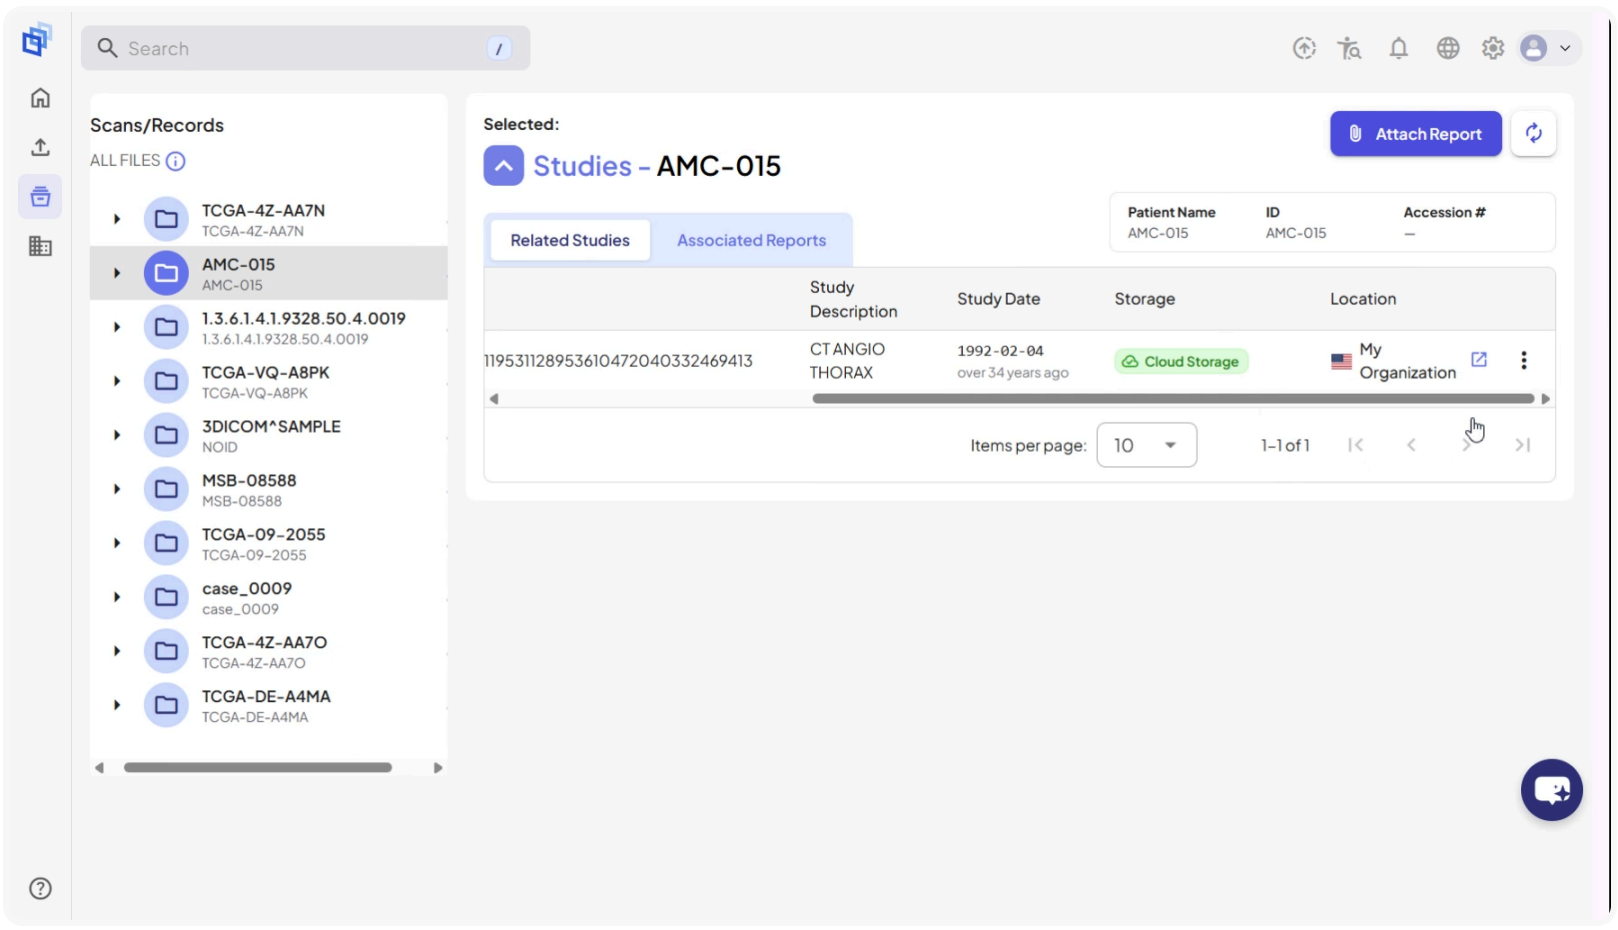
Step 8. Click the three-dot context menu on the right side of the study entry.

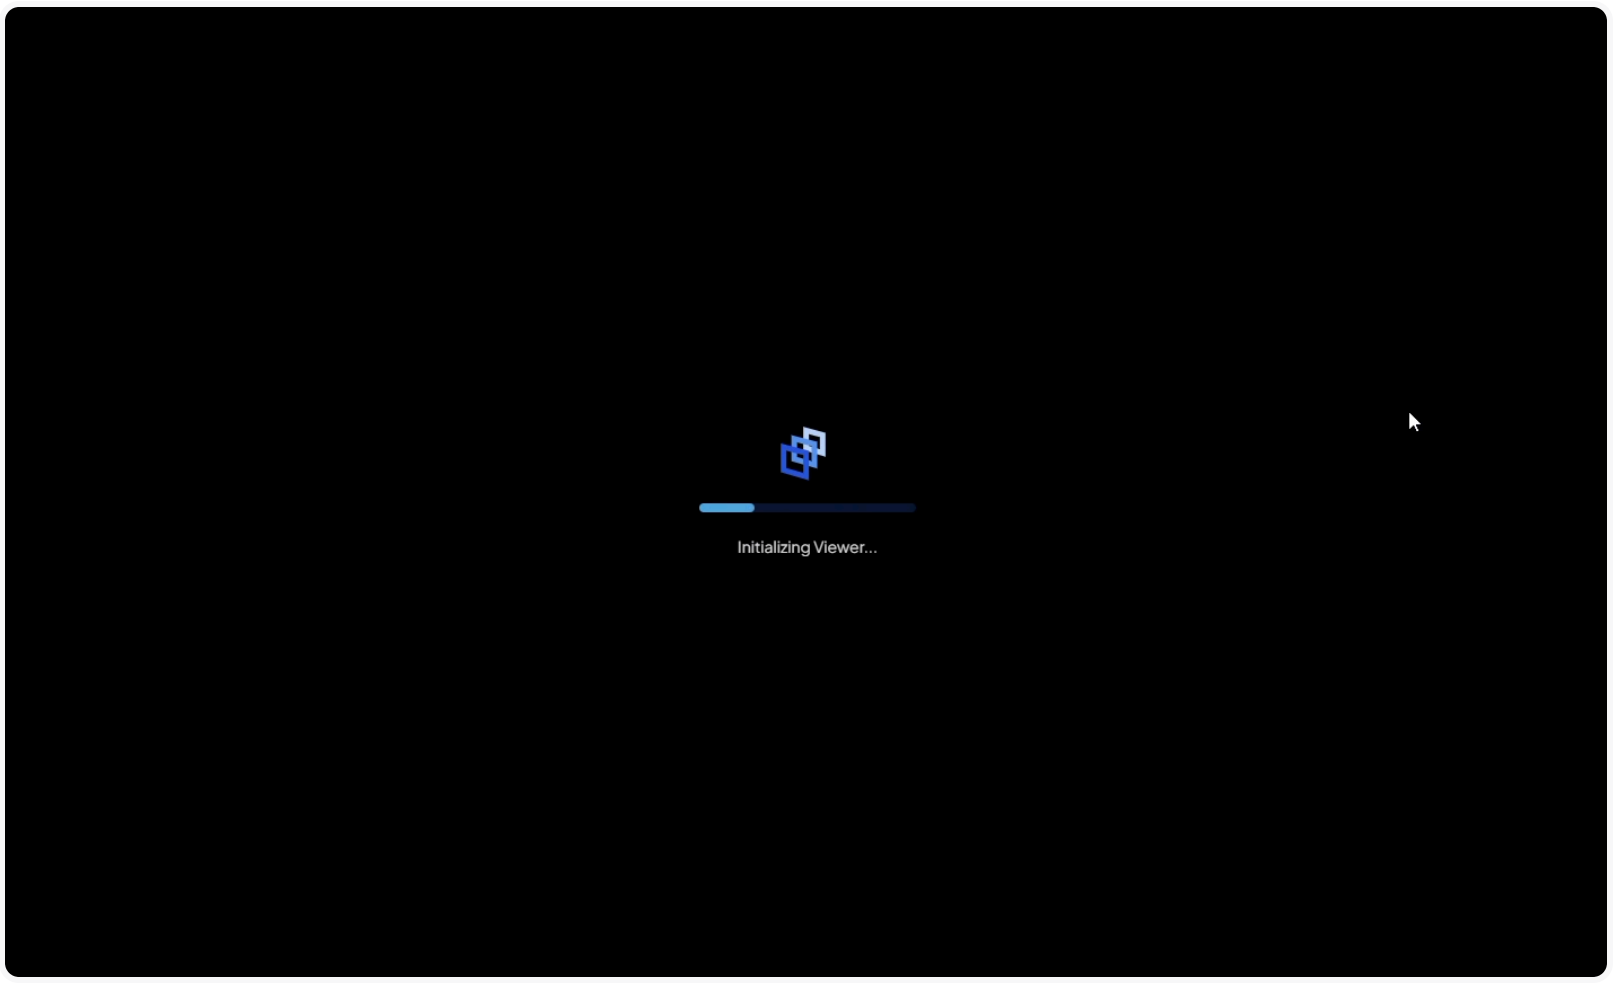


Step 9. Select **View** from the menu to open the study in the 3DICOM Viewer.



Step 10. The selected study will open in the 3DICOM Viewer.





Result

After completing these steps, you have successfully searched for a patient record and opened a study for viewing in the 3DICOM platform.
